                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to novel human genes and gene product which are implicated in certain disease states. Compounds which modulate the proteins of the invention may have extestarts, antiinflammatory, ophthalmological, antiarteriosclerotic or vulnerary activities. The sequences of the invention may be useful for gene therapy. The invention may be useful for gene therapy. The invention as tumourigenesis angiogenesis, apoptosis, inflammation, erythropoiesis, or the biological response to hypoxia conditions including processes such as glycolysis, gluconeogenesis, gluconeogenesis, gluconeogenesis, and transportation, catecholamine synthesis, iron transport or nitric oxide synthesis. The disease includes cancer, isohaemic conditions, reperfusion injury, retinopathy, neonatal stress, pre-eclampsia, atherosclerosis, inflammatory conditions or wound healing. The present sequence is that of a disease related protein encoding DNA sequence of the invention.

```
Minactivin is produced by induced human monocytes, certain macrophages and transformed cells of monocytic lineage (see WO 86/01212). Using the AA sequence obtd. for peptides of minactivin, oligonucleotide probes can spatheasleed, (see AAN70467- AAN70473, and AAN71181-N71183). The specific oligonucleotide probe may be radiolabelled and then used to screen cDNA libraries to identify clones contg. all or part of the minactivin gene. (Updated on 25-WAR-2003 to correct PI field.)
                                                                                                                                                                                                                                         DNA sequence encoding minactivin - used for monitoring and treating tumours and chronic inflammation such as rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Commercially available human placental cDNA bank in lambda gt11 phage was used to transform E.coli Y1090 and culture supernatants from the transformants screened by reaction with mouse Ab. against PA12. Clone lambda-plc 1 was one of 6 clones isolated. Pa12 is a strong and specific inhibitor for the active forms of PA so is used to treat or prevent disorders associated with abnormal levels of PA. PA is implicated in hamomal levels of PA. PA is implicated in macrophage migration and inflammatory processes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A lambda gt11 cDNA library constructed from phorbol-12-myristate-13-acetate stimulated cells of the human monocyte-11ke historytic lymphoma cell line U937 was screened. (See AAQ10850 and AAQ1081 for the probe sequences). From the putative positive clones, one was selected (lambda gt11-186) which appeared to contain the entire PAI-2 coding region. The linsert was cloned in MiJmp19 to give pDBP1 and was sequenced. (Updated on 25-MAR-2003 to correct PA field.)

                                                                                                                                                                                                                                                                                                                                                                                1401
                                                                                                                                                                                                                                                                                                                                                                                                                    The variant has amino acids 74-96 deleted. It retains the biological activity while lacking protease sensitivity of native PAI-2. The variant is prepd. by alteration of the DNA encoding PAI-2 and expression in hosts. The Hinfl-PtI segment spanning the protease sensitive site in PAI-2 was replaced by synthetic oligonucleotides with cohesive Hinfl and PstI ends, creating a variant PAI-2 in which amino acids 74-96 inclusive were deleted. See also AAQ11620. (Updated on 09-JAN-2003 to add missing 85 field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                     80
                                                                                                           The variant has amino acids 66-98 deleted. It retains the biological activity while lacking procease sensitivity of native PAI-2. The variant is pregd. by alteration of the DNA encoding PAI-2 and expression in hosts. DNA sequences encoding amino acids 66-98 were deleted from PAI-2 using the PCR technique of site-directed mutagenesis by overlap extension. See also AAQ11619. (Updated on 09-JAN-2003 to add missing OS field.)

                                                                                                                                                                                Addition of a signal sequence to PAI-2 not only facilitates secretion of the glycosylated 60 kb form of PAI-2 but also directs correct processing of the signal. The signal-contg. variant was constructed such that the artificial signal was fused to the NH2- terminal methiconine of PAI-2. Correct cellular processing of this signal peptide should result in a mature PAI-2 malecule of 41s amino acids with Net at its NH2-terminus. See AAQ11129 for PAI-2 with the alpha-1-antitrypsin signal sequence. (Updated on 09-JAN-2003 to add missing OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         430 ATTALTACTGGAAGTGTCATAAGCTGTTTTGGTGAGAAGTCTGCGAGCTTCCGGGAAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GCAGAAGAAGCTAGAAAAAAATTTCTTGGGTCAAGACTCAAAACCAAAAGGCAAAATC 605
                                                                                                                                                                                                                                                                                             Addition of a signal sequence to PAI-2 not only facilitates secretion of the glycosylated 60 kD form of PAI-2 but also directs correct processing of the signal. The signal-contg. variant was constructed such that the human alph-1-antitrypsin signal was fused to PAI-2 without its NA2-terminal methionine. Correct cellular processing of this signal peptide should result in a mature PAI-2 molecule of 414 amino acids with Glu at its NA2-terminus. See AAQ11128 for PAI-2 with a synthetic signal sequence.                                                                                                                                                                                                               A PAI-2 positive clone was isolated after screening a library (see AAQ21117-8). A BgIII site was created at the 5' end of the gene to create amutation in the third position of the second codon. A AlfII site was created at the 3' end to create mutations in the third position of the last codon and in the first base of the stop codon. A clone derived from this procedure was designated pDBP2. Two linkers were ligated with the BgIII-AfIII PAI-2 gene fragment from pDBP2 into HindII + BAmHI digested minampl9 to form pDBP3. See also AAQ21117-19 and AAQ21121-25. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                     Antitumour molecules for treatment of neoplasms - comprises first region for binding to uPA receptor and second region for uPA inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            380 GGAATTATTTACTGGAAAGTGTCAATAAGCTGTTTGGTGAGAAGTCTGCGAAGCTTCCGGG

Claim 1; Page 298; 455pp; English.

toxic restoxicity.

```
The present invention describes a method (M1) for determining a toxicological response to an agent, which comprises comparing the expression profile of more human toxic response genes. to a reference gene expression profile indicative of toxicity, and so determining the presence of a toxic response to the agent. Also determining the presence of a toxic response to the agent. Also comparising one or more polymocleotides or homologues from the genes corresponding to the partial sequences given in ABZ82842 to ABZ8764, or their fragments of at least 20 mucleotides, or homologues creponse gene plays a role on toxic response pathways by determining the expression profile of the gene after exposure of calls or a human subject to a known toxic pharmaceutical or industrial agent, comprising: (a) exposing cells to an agent or isolating the test gene expression profile of toxic response gene after exposure to a known toxic pharmaceutical or industrial agent, comparing the test comparing the test profile of toxic response gene after exposure to a known toxic pharmaceutical or industrial agent; and (c) comparing the test comparing the test profile of the expression profile of comparing the test profile to the expression profile of that gene after exposure to other known toxic compounds. The methods are useful for exposure to other known toxic compounds. The methods are useful for toxic response and determining toxic appearance or a cellular, organical system level. The arrays comprising the human genes are useful for toxic toxic pharmaceutical responses on a cellular, or exposure to expect toxic compounds and chemicals

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                          Sequence 1

MOLECTLE TYPE: Other nucleic acid;
DESCRIPTION: Synthetic DNA oligonucleotide
FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 16, Application US/07679052A
Sequence 16, Application US/07679052A
Patent No. 5298400
GENERAL INFORMATION:
APPLICANT: WHITFELD, Peter L.
APPLICANT: RICHARDSON, Michael A.
APPLICANT: BUNN, Clive L.
TITLE OF INVENTION: RECOMBINANT PRODUCT
NUMBER OF SEQUENCES: 17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ě
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 1316;
                                                                                                                                                                                                                                              Sequence 12, Application US/08662318

Sequence 12, Application US/08662318

Patent No. 5827672

GENERAL INFORMATION:

MUMBER OF SEQUENCES:

APPLICANT: Remold-O'Donnell, Eileen

TITLE OF INVENTION: Human Monocyte Elastase Inhibitor

NUMBER OF SEQUENCES:

ADDRESSEE: Wolf, Greenfield & Sacks, P.C.

STREET: GOO Atlantic Ave.

GITY: Boston

STATE: MA

COUNTRY: Boston

STATE: MA

CONFUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

CONFUTER: IBM PC compatible

OORHOTER: IBM PC compatible

OORHOTER: BADABLE FORM:

MEDIUM TYPE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/662,318

FILING DATE: September 30, 1994

ATTORNEY/ARCHITON NUMBER: 36,637

REFERENCE/DOCKET NUMBER: 36,637

REFERENCE/SOCKET NUMBER: 36,637

REFERENCE GIANTION NUMBER: 36,737

REFERENCE GIANTION NUMBER: 36,737

REFERENCE GIANTION NUMBER: 36,737

GENERAL INFORMATION:
APPLICANT:
TITLE OF INVENTION: Human Monocyte Blastase Inhibitor
NUMBER OF SEQUENCES: 16
CORRESPONDENCE ADDRESS: ADDRESSE: Wolf, Greenfield & Sacks, P.C.
STREET: 600 Atlantic Ave.
CITY: Boston
STATE: MA
COUNTRY: USA
